The Fourth Source: Effects of Natural Nuclear Reactors Robert J. Tuttle

This book describes how the effects of nature's own nuclear reactors have shaped the Earth, the Solar System, the Universe, and the history of life as we know it. It focuses on observed effects that are poorly explained by our standard theories, identifies certain errors in those theories, and shows how these effects are caused by natural nuclear fission reactors. The theory of Plate Tectonics is wrong, and it is shown that expansion of the Earth causes continental drift. A physically reasonable mechanism is proposed for expansion and observational data are presented to show that this occurs. Evolution is explained as punctuated equilibrium, with mutations caused by abrupt surges of radiation, and related life forms that have been interpreted as separate species are actually the result of radiation injury. This view is particularly effective as applied to humans. The ability of the dinosaurs to live so large is explained by use of Earth Expansion and a more massive atmosphere to provide buoyancy and effective transpiration of oxygen. These effects also explain how pterodactyls and ancient birds could fly. Expansion induced by impacts at the end of the Cretaceous caused the atmosphere to thin and the dinosaurs collapsed. Analysis of geological and biological data supports this. The astronomical distance scale is shown to be wrong, based on the misconception that trigonometric parallax is an absolute measurement. It isn't, and the method is led astray by the overwhelming number of asteroidal fragments masquerading as stars. The measurements of an expanding Universe are shown to be in error, and an expanding Universe is not needed by an alternative interpretation of Einstein's equations. This interpretation is based on the equal creation of matter and antimatter, which is known to occur. Spiral galaxies are not vast Island Universes of stars as we have thought, but are shown to be the strewn fields of debris from the nuclear fission detonation of distant planets. The Universe is not made up of 96% Dark Matter and Dark Energy, but is instead very ordinary. Abundant evidence and references provide support for all these interpretations. This book opens new opportunities for research by correcting several fundamental errors in our concepts of the Earth, Life, and the Universe.

From reader reviews:

Raymond Hernandez:

Hey guys, do you wish to find a new book to learn? Maybe the book with the name *The Fourth Source: Effects of Natural Nuclear Reactors* suitable to you? The book was written by renowned writer in this era. The book entitled *The Fourth Source: Effects of Natural Nuclear Reactors* is the main one of several books that will everyone read now. This kind of book was inspired many men and women in the world. When you read this book you will enter the new dimensions that you ever know previous to. The author explained their thought in the simple way, therefore all of people can easily to know the core of this publication. This book will give you a wide range of information about this world now. To help you to see the represented of the world in this particular book.

Wilma Blue:

Reading a publication tends to be new life style within this era globalization. With reading through you can get a lot of information that could give you benefit in your life. Using book everyone in this world could share their idea. Books can also inspire a lot of people. A lot of author can inspire their reader with their story or perhaps their experience. Not only the storyplot that share in the guides. But also they write about the ability about something that you need example of this. How to get the good score toefl, or how to teach your children, there are many kinds of book which exist now. The authors on this planet always try to improve their ability in writing, they also doing some analysis before they write with their book. One of them is this *The Fourth Source: Effects of Natural Nuclear Reactors*.

Joshua Allen:

Reading a book to get new life style in this calendar year; every people loves to study a book. When you examine a book you can get a great deal of benefit. When you read books, you can improve your knowledge, mainly because book has a lot of information into it. The information that you will get depend on what kinds of book that you have read. In order to get information about your analysis, you can read education books, but if you want to entertain yourself you can read a fiction books, this kind of us novel, comics, along with soon. The *The Fourth Source: Effects of Natural Nuclear Reactors* provide you with a new experience in reading a book.

John Silver:

Many people spending their period by playing outside together with friends, fun activity together with family or just watching TV all day long. You can have new activity to pay your whole day by examining a book. Ugh, ya think reading a book can definitely hard because you have to accept the book everywhere? It ok you can have the e-book, bringing everywhere you want in your Mobile phone. Like *The Fourth Source: Effects of Natural Nuclear Reactors* which is having the e-book version. So , try out this book? Let's find.
