Introduction to Food Process Engineering (Food Preservation Technology) Albert Ibarz, Gustavo V. Barbosa-Canovas

Consumer expectations are systematically growing, with demands for foods with a number of attributes, which are sometimes difficult for manufacturers to meet. The engineering processes that are needed to obtain top-quality foods are a major challenge due to the diversity of raw materials, intermediates, and final products. As in any other enterprise, the food industry must optimize each of the steps in the production chain to attain the best possible results. There is no question that a very important aspect to take into consideration when developing a process, designing a food factory, or modifying existing facilities is the in-depth knowledge of the basic engineering aspects involved in a given project.

Introduction to Food Process Engineering covers the fundamental principles necessary to study, understand, and analyze most unit operations in the food engineering domain. It was conceived with two clear objectives in mind: 1) to present all of the subjects in a systematic, coherent, and sequential fashion in order to provide an excellent knowledge base for a number of conventional and unconventional processes encountered in food industry processing lines, as well as novel processes at the research and development stages; 2) to be the best grounding possible for another CRC Press publication, *Unit Operations in Food Engineering, Second Edition*, by the same authors. These two books can be consulted independently, but at the same time, there is a significant and welcomed match between the two in terms of terminology, definitions, units, symbols, and nomenclature.

Highlights of the book include:

- Dimensional analysis and similarities
- Physicochemistry of food systems
- Heat and mass transfer in food
- Food rheology
- Physical properties
- Water activity
- Thermal processing
- Chilling and freezing
- Evaporation
- Dehydration
- Extensive examples, problems, and solutions

From reader reviews:

Marianne Haglund:

In this 21st centuries, people become competitive in each way. By being competitive currently, people have do something to make them survives, being in the middle of often the crowded place and notice simply by surrounding. One thing that at times many people have underestimated that for a while is reading. Sure, by reading a book your ability to survive improve then having chance to endure than other is high. To suit your needs who want to start reading some sort of book, we give you this kind of Introduction to Food Process Engineering (Food Preservation Technology) book as beginner and daily reading book. Why, because this book is greater than just a book.

Frank Moore:

Spent a free a chance to be fun activity to perform! A lot of people spent their spare time with their family, or their particular friends. Usually they accomplishing activity like watching television, about to beach, or picnic from the park. They actually doing ditto every week. Do you feel it? Do you wish to something different to fill your own free time/ holiday? Could be reading a book can be option to fill your totally free time/ holiday. The first thing that you will ask may be what kinds of book that you should read. If you want to try out look for book, may be the guide untitled Introduction to Food Process Engineering (Food Preservation Technology) can be good book to read. May be it can be best activity to you.

Sylvia Alexander:

The reason why? Because this Introduction to Food Process Engineering (Food Preservation Technology) is an unordinary book that the inside of the e-book waiting for you to snap that but latter it will surprise you with the secret it inside. Reading this book adjacent to it was fantastic author who also write the book in such incredible way makes the content on the inside easier to understand, entertaining technique but still convey the meaning entirely. So , it is good for you because of not hesitating having this any more or you going to regret it. This excellent book will give you a lot of positive aspects than the other book get such as help improving your proficiency and your critical thinking method. So , still want to delay having that book? If I ended up you I will go to the guide store hurriedly.

Nancy Soto:

On this era which is the greater person or who has ability in doing something more are more precious than other. Do you want to become one of it? It is just simple approach to have that. What you are related is just spending your time not much but quite enough to have a look at some books. Among the books in the top listing in your reading list is usually Introduction to Food Process Engineering (Food Preservation Technology). This book that is certainly qualified as The Hungry Slopes can get you closer in getting precious person. By looking upwards and review this publication you can get many advantages.
