This book introduces and assesses the development of new techniques and technologies to trace the source and fate of newly emerging and classic POPs (perfluoroalkyl substances, brominated flame retardants, organochlorine pesticides, perfluorinated chemicals, polycyclic aromatic hydrocarbons, and polychlorinated biphenyls) in environmental media, including atmospheric, marine, freshwater, and urban environments.

- Discussion of GC*GC provides an introduction and assessment of a novel technique from leaders in the field
- Introduces the development of new analytical techniques (such as 2-D GC*HC and LC*LC) to trace the source and fate
- Raises awareness about the health and environmental impact of persistent organic pollutants (POPs)
- Outlines the development of international measures to control POPs so that chemists can understand the legal issues
