## **The Rightful Place of Science: Biofuels** John A. Alic

*Biofuels* examines prospects for large-scale production of affordable, sustainable transportation fuels. Made from biomass or other alternatives to oil, such fuels would not add greenhouse gases to Earth's atmosphere or compete with food crops. Concise and authoritative, avoiding the hyperbole that surrounds so many energy technology proposals, *Biofuels* concentrates on essentials:

- How technological innovation actually takes place, not only through research but in response to market forces and business decisions.
- The dynamics of the global oil industry, which on the one hand supplies billions of people with relatively low-cost energy and on the other imperils many of these same people through climate change.
- Prospects for “drop-in” alternatives to petroleum that can be burned in existing vehicles and equipment, avoiding the need to turn over a fleet that in the United States alone numbers some 250 million cars and trucks.
- US government policies for fostering innovation, in energy and more broadly, and the strengths of the Defense Department relative to other agencies in supporting technological advance and scale-up of alternative fuels.

*Biofuels* locates the central question for policy in the multitude of pathways for making fuels from biomass or other non-petroleum feedstocks, including natural gas. Because so many of these technologies are immature, and others little more than hypothesized, costs and environment impacts cannot be known. Policymakers have stumbled over these uncertainties, on the one hand subsidizing unsustainable fuels such as corn ethanol and on the other hoping that visionary “breakthroughs” will somehow emerge from science and research to resolve the conundrums of energy and climate. Needless to say research is indispensable. Yet sound policies, *Biofuels* argues, must also promote near-term alternatives to petroleum that do not require major changes to vehicles and infrastructure—something that the Defense Department, seemingly alone within government, recognizes. Defense agencies, moreover, have great technological capacity, understand in a very practical sense how successful innovation occurs, and know how to work with the private firms that will bring innovations to market. Of course the Pentagon sometimes goes wrong, and military-driven innovation has not been cheap. But then innovation almost by definition is costly and disruptive. By capitalizing on military demand, *Biofuels* concludes, the US government could speed innovation, help the nation's own economy grow, and add to the toolkit available worldwide for reducing greenhouse gas emissions.

## **From the Forward by Clark A. Miller**

“Creating a new energy industry is one of the most complex enterprises human societies have ever sought to undertake. *Biofuels* is essential reading for those interested in these questions.”

## **From the back cover**

“This short volume provides a cogent and insightful assessment of the perils, pitfalls and possibilities for biofuels [suggesting] how difficult it will be to make biofuels tenable in the long run without major subsidies

and technical breakthroughs.”

C. Ford Runge, Distinguished McKnight University Professor of Applied Economics and Law, University of Minnesota.

“Alic is also an optimist, and he presents a convincing pathway for sensible military and government investment in incremental biofuel innovations.”

Lisa Margonelli, author of *Oil On The Brain: Petroleum’s Long, Strange Trip to Your Tank*.

“Alic applies his considerable expertise to move debates about biofuels beyond the simplistic notion that governments should avoid picking winners—and instead focuses on how to design policy to encourage innovation while acknowledging the diverse set of goals that changes to transportation fuels might address.”

Professor Greg Nemet, Chair, Energy Analysis and Policy, University of Wisconsin.

### **From reader reviews:**

#### **Clarine Davidson:**

What do you concerning book? It is not important to you? Or just adding material if you want something to explain what yours problem? How about your extra time? Or are you busy man? If you don't have spare time to complete others business, it is make you feel bored faster. And you have free time? What did you do? Every individual has many questions above. They need to answer that question because just their can do that. It said that about publication. Book is familiar in each person. Yes, it is appropriate. Because start from on pre-school until university need this specific The Rightful Place of Science: Biofuels to read.

#### **Edwin Ball:**

The actual book The Rightful Place of Science: Biofuels will bring that you the new experience of reading any book. The author style to explain the idea is very unique. When you try to find new book you just read, this book very suitable to you. The book The Rightful Place of Science: Biofuels is much recommended to you to read. You can also get the e-book from your official web site, so you can quicker to read the book.

#### **Judy Bowen:**

Beside this specific The Rightful Place of Science: Biofuels in your phone, it might give you a way to get nearer to the new knowledge or information. The information and the knowledge you can got here is fresh through the oven so don't be worry if you feel like an old people live in narrow small town. It is good thing to have The Rightful Place of Science: Biofuels because this book offers to your account readable information. Do you at times have book but you rarely get what it's facts concerning. Oh come on, that will not end up to happen if you have this in the hand. The Enjoyable option here cannot be questionable, such as treasuring beautiful island. So do you still want to miss that? Find this book as well as read it from at this point!

#### **Meredith Bailey:**

This The Rightful Place of Science: Biofuels is new way for you who has intense curiosity to look for some information since it relief your hunger associated with. Getting deeper you on it getting knowledge more you know otherwise you who still having tiny amount of digest in reading this The Rightful Place of Science: Biofuels can be the light food to suit your needs because the information inside this kind of book is easy to get by simply anyone. These books develop itself in the form that is reachable by anyone, yep I mean in the e-book type. People who think that in e-book form make them feel drowsy even dizzy this reserve is the answer. So there isn't any in reading a reserve especially this one. You can find actually looking for. It should be here for you. So , don't miss this! Just read this e-book kind for your better life and knowledge.
